How to get started

Whether you represent a new or an existing group, your first step to register with the Community Speedwatch Online application is to navigate your web browser to:

www.communityspeedwatch.co.uk

From the top menu bar press 'Register' and follow the registration wizard , by clicking on 'Create new group'. Select from the various dropdown menus and enter your contact details. When finished a confirmation email with further instructions will follow shortly after.
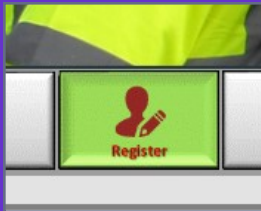

If you are interested in joining an <u>existing group,</u> select 'Join exiting group'', identify the group you would like to join and follow the instructions in the registration wizard.

What we do

Organising Community Speedwatch activities efficiently is often a difficult task. Who is trained and available when? Who wants to work from which sites and be teamed up with whom? Who collects the equipment, gets the offence records logged, checks the accuracy, and feeds the results back to the group? Most often all this work rests with the coordinators.

Before teams are out recording speeding vehicles, sites need to be identified, risk assessed and approved, operators need training, equipment booked, collected and checked. Operators need reminding, schedules re-checking and often changing. And, at the end of the day, does it all make any difference to solving the problem of speeding?

The CSW Online platform organises all group-related activities for you – and much more. It provides operators with vehicle make recognition training, links up with the wireless roadside computer tablet for easy recording, and DVLA pre-checks the logged offences before automatically passing your data on to the Police for further processing—or sending letters using DVLA data.

Who we are

Working closely with the Police, the application is developed by professional software engineers on the back of years of experience managing a large, successful Community Speedwatch group. It soon became obvious that the principle of autonomy under which groups and local Neighbourhood Policing Teams operated the scheme was ineffective. As a result, a cohesive management approach was devised to solve the problem. The CSW Online application sits at the core of this re-organisation.

Operator fatigue caused by lack of measurable and sustainable results or inconsistent and missing feedback are the two most common reasons groups eventually cease to operate. Keeping the momentum going is an arduous job often pitched against unexpected adversaries.

Volunteering efforts are precious and must be nurtured at all times. Providing a variety of stats, support tools, and alternative solutions to the more conventional methods of tackling speeding, the CSW Online platform is designed to be a one-stop-shop assisting with the task of successfully bringing the speeding problem under control.

Working with you

To understand the nature of the obstacles Community Speedwatch groups are facing, you need to gain hands-on experience coordinating the work involved. As with anything else, tedious and repetitive routines are considered detrimental to achieving your goal. By introducing shortcuts and bespoke solutions, we have established an ideal partnership platform, where problems experienced by most groups and the various organisations involved—not least the Police, are solved in a uniform manner; adhering to the same high standard, and following the same rules.

Combatting speeding is a team effort. Communities work together across boundaries with local and national authorities to reinforce the message that speeding is not acceptable; that impunity is a thing of the past. CSW Online is your gateway to enter this partnership and make your efforts worthwhile.
